

Approach to uveitis management

Outline:

- Explanation of Standard Uveitis Nomenclature terminology
- Differentiating infectious and non-infectious uveitis
- Treatment of infectious uveitis
 - Specific examples:
 - Herpetic disease
 - Syphilis
 - Toxoplasmosis
- Treatment of presumed autoimmune mediated uveitis
 - Specific examples:
 - Anterior uveitis
 - Episcleritis/Scleritis
 - Posterior uveitis
- Sustained release steroid implants
- When short term steroids are not enough: systemic immunosuppression
